How to play:

There are 32 unique playing cards here to print and laminate.

Give each student a card and a handful of maths counters.

Call out the times tables questions on the caller's cards at random one at a time - the players place a counter on the answer if they have it. Keep the caller's cards you have used in a pile to check the bingo later.

The first time the answer doesn't appear on their card the player may place a counter on the "Free Space".

When a player gets 5 counters in a row in any direction, they call out "BINGO!" The game then starts again.
